

SHURJOINT PIPING PRODUCTS

A Shurjoint Group Company

Press Release (Sept. 26, 2005)

Shurjoint Offers Moly (MoS₂) Coated Stainless Steel Bolts & Nuts

Dear *Shurjoint* customers;

Thread galling of stainless steel fasteners is a fairly common industry issue, while infrequent when galling does occur it can cause a real problem for the installer. The IFI (Industrial Fastener Institute) gives the following three suggestions for dealing with thread galling.

1. Slow down the installation, that is the RPM speed.
2. Lubricate the internal and/or external threads frequently. The suggested lubricant should contain substantial amounts of molybdenum disulfide (Moly), graphite, mica, or talc.
3. Using a different combination of bolt and nut materials reduces galling.

Moly coated bolts & nuts

We recommend adoption of the above suggestions and to further or reduce or eliminate the occurrence of thread galling *Shurjoint* is now offering **moly (MoS₂) coated stainless steel bolts and nuts** with its stainless steel couplings.

Please note we have just begun this changeover to the new materials and as such you may receive mixed shipments until existing inventories are exhausted. If required, please specify the moly coated bolts and nuts when ordering. Your patience and understanding are appreciated during this transition period.

Silicone bronze nuts are also available upon request.

Should you have any questions, please contact *Shurjoint* or to your local distributor.

Sincerely,

Howard Hagiya
President
